Climate Crisis and the Role of Private Sector

In 2021, when the new climate system began, we are still in the midst of the most devastating pandemic and the worst global recession. Covid-19 has shown that the foundations of economic stability and human and planetary health are precarious. Many governments are now looking towards rapid recovery with stimulus packages. In order to simultaneously achieve the global challenges of overcoming Covid-19 and carbon neutrality, active mobilization of private resources has become one of the most critical factors. The 2021 conference aims to address the private sector's participation in climate finance as a significant theme. In addition, we would like to discuss the role of various stakeholders in strengthening global responses to climate crises, such as the international community's carbon-neutral strategy, efforts to cope with climate change in developing countries through international climate funding, and corporate strategies.

The Conference will be held as a Webinar in light of the current Covid-19 pandemic.

※Please respond to the conference satisfaction survey after attending the conference.

Winners of the lucky draw can get a mobile gift voucher.
